

SKI NAUTIQUE

AN ICON REINVENTED

TRADITION • INNOVATION • PERFORMANCE • CRAFTSMANSHIP

When a rare combination of elements like these come together in a ski boat, it's sure to provide a waterskiing experience unlike anything before. With a blended carbon fibre and fibreglass construction method that creates the perfect balance of strength and weight, this new icon is lighter than any other ski boat on the market and creates the softest wakes imaginable. Add that to the brand-new MicroTuner technology and the All-New 2019 Ski Nautique is the best waterski boat ever created. A new era in 3-event waterskiing is here.

The Ski Nautique comes with a wide variety of engine options. Join Performance Marine Engines (PCM), Partnering with PCM and GM Marine Engine technology, the new Ski Nautique boasts the very best powerplants in towed watersports. The Ski Nautique comes standard with the reliable and proven performance of the PCM 200 engine. Upgrade to our industry-leading technology in the H20 and H20i engines. These direct-injection powerplants have taken the watersports world by storm producing the perfect pull for record breaking results.

Aggressive styling and styling lines make up the jaw-dropping exterior of the new Ski Nautique hull. For the first time in history, Nautique has incorporated carbon fibre into the build process of the Ski Nautique in order to reduce weight. A proprietary method of integrating Carbon fibre along with fibreglass into the coxed hull structure allowed our engineering team to find the perfect balance of strength and weight. Spray defusers and the reverse chisel shape of the hull force the spray of the boat parallel with the water surface so it doesn't disturb the wakes or bounce up and create unwanted spray for the skier.

Maximising the driving experience played a major role in the design of the new Ski Nautique. The asymmetrically designed dash provides numerous benefits, with the off set 12.4" SYNC Forestry Touchscreen. The main Command rotary dial gives you the ability to breeze through menus and settings while sitting comfortably in the driver's seat, and a pocket on the left side of the steering wheel keeps your phone protected. The Ski Nautique has the best visibility of any ski boat on the market, with a clear view of the course and your surroundings thanks to the low profile dash and re-configured seat and windshield heights.

The patented MicroTuner technology is a first-ever in the watersports world. These MicroTuners automatically deploy into the water at the transition of the hull and disturb how water flows behind the boat. That disturbance has a very specific job, the MicroTuners cause water to fill in the trough of the wake, which greatly reduces the drag on skis typically felt in these areas. It's allowed for skiers to keep their edge more engaged while directly behind the boat so they are able to load the line and generate speed in order to have more time at the next turn.
